Finding ways to maximize existing technology and decrease IT spending are on the minds of IT Managers everywhere. With the growing complexities surrounding technology and the decrease in IT resource bandwidth and availability, look to the experts at Applied Computer Solutions (ACS) for help.

At ACS, we provide strategic systems integration—incorporating the entire enterprise into each and every solution. By keeping an eye on every detail, but never losing sight of the big picture, our engineers will maximize the existing infrastructure and add technology components that enhance and enable the overall technological environment.

We have a complete offering of professional services that can be adapted to meet your individual needs. As your trusted advisor, we offer solutions that will optimize your enterprise infrastructure.

Our Approach

At ACS, we understand that your enterprise infrastructure is the core of everything you do and that all individual components must fit together to achieve optimal results. That is why we have focused practice areas specifically designed around the critical technologies impacting your business: Systems, Storage, Security, Networking, and Systems Management. The dedicated engineers for each practice area are experts in their field, focusing on knowing the latest

technology and solutions to address any concerns you are facing.

Our dedicated resources have the in-depth knowledge and expertise to examine particular issues and how they impact the entire technology landscape. No matter what challenges you are facing, ACS can mobilize the right people, skills, and technologies to create a solution specifically designed for your needs.

During each engagement, we follow a proven methodology with inherent efficiencies built into each stage. This provides for a smooth transition and cost-effective bottom line. Regardless of the engagement, whether a simple integration or a large, full-scale deployment—our experts collaborate with you at every stage to ensure success.

Our People

ACS has a broad range of experience and skills to provide end-to-end IT services and solutions—all with the convenience of a single point of contact. Our professional services organization is made up of top industry professionals who have the highest level certifications, plus extensive industry experience as MIS professionals in large environments. They have faced the same kinds of enterprise management challenges you are encountering and are skilled in assessing your needs and designing a system to provide you with maximum results.

PROFESSIONAL SERVICES

And as your trusted advisor and long-term partner, we're always here if you need us down the road.

Our Partners

We partner with the leading technology providers to deliver solutions that create optimal IT efficiencies and enhance your business. The strength of our partnerships ensures reliable and scalable solutions, ultimately reducing risk and maximizing investment. Combining the finest technologies available with our technology expertise will produce comprehensive, integrated solutions that optimize your IT infrastructure.

About ACS

As a strategic solution provider, ACS offers our customers comprehensive solutions that enable their enterprise infrastructure. Utilizing our Professional Services organization and the finest technologies available, we build innovative solutions tailored to each client's unique requirements. Our experienced team develops solutions that create technological and business value, delivering solutions and tools that build upon the existing infrastructure foundation.

The result — enterprise infrastructure optimization.

Our Professional Services Methodology

ASSESS

ACS works with you to help define your business objectives and requirements. If requested, we will provide a detailed assessment to evaluate the overall environment and further define your needs.

DESIGN

ACS develops the architecture and detailed design of a solution(s) that best fits your goals and objectives. At this time the creation of build documentation is started.

DEPLOY

ACS works with you to determine how to best implement the chosen solution. We identify internal and external resources and develop an implementation plan. The ACS engineer will identify risks involved during the implementation process and provide methods to mitigate those risks. ACS houses a deep bench of IT professionals to deploy the solution.

ENABLE

The ACS Engineer will provide tutorial time for you to review the configuration and provide instruction as to the basic operation, enabling your team to be self sufficient. If necessary, ACS will suggest classes to ensure adequate training. Our Help Desk is also available to aid in the day to day operation of your solution.

OPTIMIZE

While Enable focuses on individual projects, Optimization focuses on long-term, overall system performance. ACS focuses the Optimization efforts and resources in the areas most beneficial to your organization—maximizing investment over the long-term.
